# READ THIS FIRST!

## D100 Series Basic Operation

- Power the instrument ON by turning your avionics power bus ON. It is OK to leave the instrument ON during engine start.
- The instrument ships with factory-configured screens that can be modified by the user.
- With no menu displayed, cycle through screens in the rotation using the hotkeys: **(1)** cycles to the previous screen and **(6)** cycles to the next screen.
- Display a page's menu by pressing **(2)**, **(3)**, **(4)**, or **(5)** below that page. While a menu is displayed, buttons perform the function as labeled on-screen.

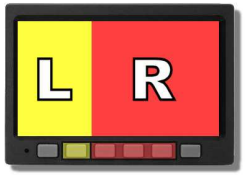
**(1)** ⏮ Previous Screen in Rotation

**(6)** Next Screen in Rotation ⏭

**Full Screen**

**2/3 | 1/3 Screen**

**1/3 | 2/3 Screen**



The configuration of the pages on the screen determines which buttons are used to display a page's menu.

- With no menu displayed, press and hold **(6)** to display a list of all available screens, including those not in the hotkey screen rotation.
